

# MyBloodHealth® Features & Benefits

As many as one in three perioperative patients with anemia undergo surgery, which significantly increases their risk of infection, need for blood transfusion, and contributes to increased morbidity and mortality. These patients are more frequently readmitted to the ER, stay in the hospital longer, and require more physical therapy sessions. Not to mention, the price tag for hospitals treating anemia is often more than what bundled payments will cover.

Additionally, identifying and treating anemia often relies on manual processes and multiple data sources, which can be time-consuming, lead to data errors, and ultimately result in dissatisfied patients.

So, what if there was a way to streamline treatment, better prepare patients for surgery, and reduce cost? There is! It's called MyBloodHealth®.

*MyBloodHealth®, a patented anemia management system, can help you better identify patients, avoid unnecessary blood transfusions, prevent complications, and most importantly, increase your patients' satisfaction.*

## FEATURES

Easy-to-use, virtual perioperative surgical home (VPOSH®) software solution

Lowers total cost of care for hospitals

Custom care plan for each patient based on their specific needs

## BENEFITS

No need to rely on inefficient means of tracking patients with anemia

You can retain more of your standard payment for procedure or bundled payment

Reduced number of transfusions, blood loss, complications, and readmission rates

Contact us to learn how to enhance your anemia management efforts.

Nothing herein and no aspect of any services provided by Accumen is intended – or shall be deemed – to subordinate, usurp, or otherwise diminish any providers' sole authority and discretion with respect to all clinical decision-making for its patients.*

## About MyBloodHealth®

MyBloodHealth is enterprise software that helps clinicians establish and support anemia management as a standard of care. When anemia isn't caught in time, it can result in poor patient outcomes, unplanned transfusions, or cancellation of surgery – all costly challenges for hospitals. MyBloodHealth solves these problems by identifying anemic patients scheduled for nonemergent, high blood loss, elective surgeries, women's health – and allows clinicians to create personalized coordinated care prior to surgery. An anemia management program powered by MyBloodHealth improves operational and financial performance for hospitals by reducing unnecessary costs, length of stay and complications, while increasing patient quality, safety, satisfaction, and hospital revenue.
